Scanly by DuckDuckGroup

Want an easier way to use Cybersecurity software?
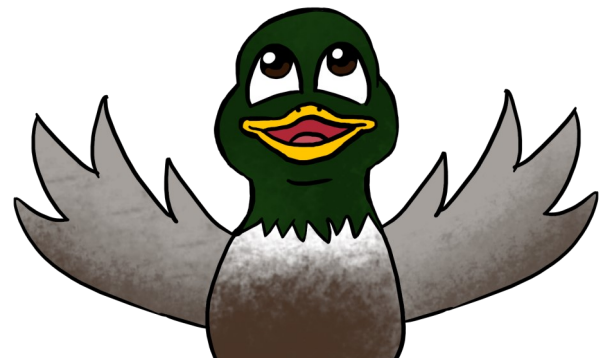

Talk to Scanly!

Scanly by DuckDuckGroup is an **easy-to-use chatbot frontend** for your security suite. By talking to Scanly you can perform **enumeration** scans on your network, check for network **vulnerabilities** and search for breached **credentials**, all in one place.

An easy way for **prosumers** to use the tools they love

Makes managing security easier for **businesses**

A simple interface to get **students** into Cybersecurity

- Interfaces with the popular professional security tools Nmap, Have I Been Pwned and OpenVAS.

- A user-friendly solution for beginners or professionals that want an easier way to get the job done.

- No need to use complicated command line interfaces - talk to Scanly by typing what you want to say and clicking on buttons.

- Based on Botkit.ai technology from the Microsoft bot framework.

It's as easy as a duck takes to water!
